

PROJECT 2 — HEALTHTECH INTERNSHIP

HealthTech

AI-Powered PHI/PII Redaction Pipeline

Automated HIPAA-compliant redaction of Protected Health Information from clinical documents before they reach any AI model

FULL STACK

REACT + NODE.JS

HIPAA COMPLIANT

AI POWERED

 **THE PROBLEM**

Healthcare AI Has a Privacy Crisis

Sending unredacted patient data to external AI APIs violates HIPAA & PIPEDA

Regulatory Risk

Healthcare organizations face massive fines for sending PHI to external AI APIs without proper de-identification — violating HIPAA Safe Harbor rules.

Data Leakage

Patient names, SSNs, dates of birth, medical record numbers and 14 other PHI identifiers are exposed when clinical text reaches cloud AI models.

Manual Process

Manual redaction is slow, error-prone and not scalable. Clinical teams waste hundreds of hours per month on compliance tasks that AI can automate.

No Audit Trail

Without an automated pipeline, there is no complete audit trail showing which documents were redacted, when, and by whom — a compliance requirement.

THE SOLUTION

HealthTech Redaction Platform

A proxy service that intercepts, redacts and audits — automatically

**18**

PHI TYPES

HIPAA SAFE HARBOR

**USER PERSONAS**

Who Uses HealthTech?

Three distinct roles with different needs and access levels

**Clinical User / Doctor**

Primary Role — Most Active User

Uploads raw patient consultation transcripts and clinical notes. Receives perfectly formatted clinical notes with all patient names replaced by pseudonyms. Uses AI Chat Assistant to analyze redacted documents and extract diagnoses without any PHI exposure.

**Compliance Officer**

Oversight & Audit Role

Reviews proxy logs to ensure 100% of outgoing AI payloads have been properly redacted. Downloads compliance reports, monitors PHI detection accuracy, and maintains audit trails required by HIPAA regulations for the organization.

**Administrator**

System Management Role

Manages user accounts, assigns roles, configures AI model settings, sets redaction policies, and monitors system performance. Full access to admin panel with user activation/deactivation controls and system configuration.

All Features Built

Every requested feature + bonus additions

Feature	Description	Status
 Login	JWT secure auth with demo accounts	✓
 Signup	2-step registration, role selection, password strength meter	✓
 Forgot Password	Email reset with success UI	✓
 Email Verification	Verify email page post-registration	✓
 Role Based Access	Doctor / Compliance Officer / Admin — different permissions	✓
 Dashboard	Area, Bar, Pie charts + stats + recent docs + quick actions	✓
 PDF / DOCX / TXT / Audio Upload	Drag & drop, progress bars, 50MB limit, validation	✓
 AI Redaction	18 HIPAA Safe Harbor identifiers, 3 redaction modes	✓
 Download Redacted PDF	One-click download of PHI-free document	✓
 Export Excel / PDF	Compliance, Redaction, PHI, Audit reports in 3 formats	✓
 AI Chat Assistant	HIPAA-safe AI chat to analyze redacted documents	✓
 Doctor Profile	Full profile, specialty, bio, 2FA, notification settings	✓
 Notification Bell	Real-time notification panel, unread badge	✓
 Search Bar	Global search modal with ⌘K shortcut	✓
 Dark Mode	Full dark/light theme with localStorage persistence	✓

 Activity Timeline	Complete audit trail, filterable by type	
 Mobile Responsive	Works on all screen sizes, collapsible sidebar	
 Admin Panel	User management table, status toggle, system config	

AI REDACTION ENGINE

18 HIPAA Safe Harbor Identifiers

All identifiers automatically detected and redacted

Patient Names

Full names, titles, initials
replaced with [NAME_1]

Dates

DOB, service dates,
admission dates →
[DATE_1]

SSN / NPI

Social Security & NPI
numbers → [SSN_1]
[NPI_1]

Phone Numbers

All phone/fax formats →
[PHONE_1]

Email Addresses

All email addresses →
[EMAIL_1]

Addresses

Street, city, ZIP →
[ADDRESS_1]

Medical Record

MRN numbers → [MRN_1]

IP Addresses

Device IP addresses →
[IP_1]

+ 10 More Types

Account numbers,
certificates, biometrics,
URLs, VINs...

3 Redaction Modes: Pseudonym Mode • Black Redaction • Category Labels

TECHNOLOGY STACK

Built With Modern Tech

Full-stack architecture for production-ready deployment

Frontend

REACT 18 VITE
TAILWINDCSS
REACT ROUTER V6
RECHARTS
REACT DROPZONE
FRAMER MOTION
REACT ICONS AXIOS

Backend

NODE.JS EXPRESS.JS
JWT AUTH BCRIPTJS
MULTER MONGOOSE
HELMET RATE LIMITING
MONGODB

Security

TLS 1.3 ENCRYPTION
AES-256 AT REST
CORS PROTECTION

INPUT VALIDATION

Architecture

REST API MVC PATTERN
CONTEXT API
PROTECTED ROUTES
PROXY SETUP

Advanced Analytics Dashboard

Real-time insights into your PHI redaction pipeline

Live Charts

Area chart for weekly activity, Bar chart for monthly PHI trends, Pie chart for PHI type distribution

KPI Stats

Documents redacted, PHI identifiers found, files uploaded today, compliance score — all live

Recent Docs

Latest uploaded documents with status badges, PHI count, file size, and timestamp

Quick Actions

One-click access to Upload, Redaction, AI Chat, and Activity Timeline

Notifications

Real-time notification bell with panel showing redaction complete, alerts, uploads

Global Search

Search all documents, patients and reports with ⌘K shortcut and recent history

 HOW TO RUN

Get Started in Seconds

One command to launch everything

OPTION 1 — PowerShell (Recommended)

```
# Run this in your terminal  
.\run.ps1
```

OPTION 2 — Two Terminals Manually

```
# Terminal 1 — Backend  
cd backend && node server.js  
  
# Terminal 2 — Frontend  
cd frontend && npm run dev
```

 Doctor Login

Email: **doctor@health.com**

Password: **password**

 Admin Login

Email: **admin@health.com**

Password: **password**

Frontend: **<http://localhost:3000>** | Backend API: **<http://localhost:5000>**

HealthTech

AI-Powered PHI/PII Redaction Pipeline

A complete, production-ready HIPAA-compliant platform that protects patient privacy, enables AI adoption in healthcare, and provides full audit compliance — built with React, Node.js and modern web technologies.
